

PRODUCT TIPS

1. A Secondary Patio Door Lock or Limiter can be added for applications requiring additional security.
2. Bumper guards, to keep door sash from contacting the opposite jamb during its travel, are highly recommended.
3. If hardware shown cannot be fitted to the door because of door/hardware interference, contact Truth for other available options.
4. Installation of longer screws into the keeper rail will increase security. Screws long enough to reach the rough opening frame are recommended.
5. For easy correction of out of square or racked door installations, the use of Jamb Jack (frame adjusters) is recommended. Frame adjustment can improve both weather seal tightness and door operation over the life of the door.
6. For vinyl applications, mounting screws should pass through two PVC walls or one PVC wall and one insert wall. For this reason, it may be necessary to use a longer screw than is recommended.
