

PRODUCT TIPS

1. We recommend that a casement WOCD be used in casement application where applicable and building codes require such application. Please check the local building codes for applicability and egress size requirements.
2. Casement WOCD can be factory installed or field retrofit on all profile material types where standard/nominal (0.719" W X 0.438"H) hinge cavity is available. Please observe all safety instructions and consult window manufacturer when you have questions or concerns. Please contact sales for application to ensure form, fit, and function for your specific window application
3. Standard 2 walls (vinyl, fiberglass, aluminum, and other composite materials) on the profile are required for proper screw retention
4. Correct handling with proper installation is important to ensure proper operation of the device

ARCHITECT SPECS

Window Opening Control Devices as required by ASTM F2090-21, the standard specification for window control devices with emergency (egress) release mechanisms. Product will limit the window opening to less than 4" and requires two actions to release the device allowing the window to open fully for egress purposes. Actions to release the device for egress purposes are to be performed without the use of keys, tools, or special knowledge. WOCD will automatically re-latch when window is fully closed. This WOCD shall be "SafeGard™ Casement
