

# Safeguard<sup>®</sup> 2R

## Residential

The easy to operate SafeGard 2R is designed to limit the casement window opening to less than 4”.

This patented releasable limit device for windows meets the ASTM F2090-21 (window fall prevention) safety requirements for self-resetting, egress capable, fall prevention devices.

Arm assembly has a decal with simple operating instructions, and track is assembled with visible colored plastic to discern the separate operations.

Designed to allow for factory installation as well as field application by trained personnel. Fits in the standard hinge cavity of 0.719"W x 0.438"H (nominal).

## HIGHLIGHTS

- Meets ASTM F2090-21, with additional benefits
- Prohibits the free passage of a 4” diameter rigid sphere
- Requires two separate actions to release the mechanism
- WOCD and egress release will not reduce the open area of the window unit beyond code requirements
- Avoids interference with operation or performance of window
- Fully concealed when window is closed
- Easy, accurate factory install. Field adjustment features allows for up to 1/8” sash sag adjustment from inside the home
- Suitable for wood, composite and vinyl windows
- AmesburyTruth standard 10-year warranty
