Engineered Solutions. Trusted Results.

PRODUCT TIPS

- 1. When two locks are used on one window, the placement of each lock, with respect to its keeper, becomes very critical to maintain a constant weatherseal on all sides of the window and to ensure that each lock engages properly with its keeper.
- 2. For accurate hardware placement in vinyl or metal applications, predrilling of the window profile is recommended.
- 3. For vinyl window applications, mounting screws should pass through two PVC walls, or one PVC wall and one insert wall. For this reason, it may be necessary to use a longer screw than is recommended.
- 4. For metal window profiles, we recommend stainless-steel machine screws. However, in most applications, stainless-steel sheet metal screws will provide adequate holding power.
